SHE
Health & Safety Software

Change your perspective of health and safety management

The modern workforce is changing. It is more global, mobile and diverse than ever before. Organisations are increasingly responsible for contractors, agency, part-time and remote workers - often leading to challenges in managing health and safety.

Health and safety doesn't happen behind a desk

Our health and safety software solution, Assure, provides organisations with an easily accessible way to manage health, safety and compliance. Employees and contractors can easily track, report, view and complete health and safety information, 24/7, on-site or off-site.

Transform safety data in to actionable insights

Assure empowers safety professionals in taking a more proactive approach to health and safety management by analysing data and identifying trends. Leading indicators - such as safe and unsafe observations - can be tracked to help predict where preventative measures will be most effective.

With typical payback within 12 months, we have seen individual customers benefit from:

700%
increase

in incident reporting

17,000+
recorded

behavioural conversations since implementation

85%
reduction

in time spent on reporting

Located across the UK, US and New Zealand, our experienced team are IOSH or NEBOSH accredited to understand customer needs and speak your language. We talk to thousands of health and safety professionals annually and our development is led by your real-life challenges: we listen carefully to deliver solutions that meet your evolving business needs.

Modules

Risk

Provides up-to-date, accurate risk information to staff and contractors. Facilitates action escalation and approval by management with a complete audit trail.

Incident

Manages all types of incidents using a comprehensive set of tools for documenting, reporting and investigation. Tracks and reports on preventive/corrective actions and overdue tasks.

Audit

Maintains compliance and best practice across multiple sites and locations. Produces summary or individual health and safety reports at site, department or company level.

People & Training

Records, documents and reports employees' training compliance and renewal dates. Monitors individual training needs, sending automatic email reminders and training matrix report.

Asset

Supports safe maintenance and operation of assets and equipment, including registration, testing and inspection. Sets maintenance and testing deadlines and sends automated reminders.

Behavioural

Records safe and unsafe observations by all employees before they become a near-miss or an incident. Enables sharing of best practice and improvements to promote an inclusive health and safety culture.

Contractor

Registers contractors' details including contacts, service information and insurance compliance. Provides complete visibility of contractor qualification and validity of insurances and certifications.

Environment

Manages environmental compliance by recording emissions, samples and waste management activity. Pre-configured reports help identify ways to improve profitability by reducing waste.

Portal

Improves accessibility to health and safety information across the whole organisation. Employees and contractors can report, view and complete health and safety information in one central place.

Mobile

Supports 24/7 health and safety management, on or off-site. Allowing employees and contractors to report health and safety information, regardless of location.

Insights+

Business intelligence tool which identifies trends, tracks leading indicators and predicts the most effective preventative measures. Also enables detailed analysis of individual events.
